

**Maintenance recommendations after use (every time)**

**Wear full protective gear during maintenance !**

**Always act according to the safety instructions as supplied with each tool !**

- For all thermoplastic Core hose assemblies
- Necessary equipment: soft cloth

**! Replace the Core hose if one of the following items is wrong.**

**Step 1**

- Check general condition Core hose.
- Check Core hose for traces of oil leakage.
- Clean the Core hose with water and soap when it has been in contact with aggressive fluids.

**Step 2**

- Check Core couplers and dust caps for dirt and/or oil leakage.
- Clean Core couplers with a clean and soft cloth, if necessary with water and soap.
- If necessary grease with hydraulic oil or use WD-40.
- Check functioning Core couplers (see fig. 1, page 4).
- Reconnect loose dust caps to Core couplers.

**Step 3**

- Replace the Core hose, when obvious traces of kinks are visible.

**Step 4**

- Replace the Core hose when damage is such that the one braided layer of high tensile synthetic fibre is clearly visible.

**Step 5**

- Replace the Core hose, when blisters are visible.

**Step 6**

- Replace the Core hose, when bubbles or bulges higher than 1mm are visible.
