

Maintenance recommendations:

After use (every time)

- **Wear full protective gear during maintenance.**
- **Always act according to the safety instructions as supplied with each tool!**

Necessary equipment: WD40, soft cloth

**Step 1**

- Check general condition of the hose reel
- Check carrying frame for damages
- Check for oil leakage
- Clean hoses with water and soap when they have been in contact with aggressive fluids
- Check reel handle for correct functioning

**Step 3**

Replace hoses when blisters are visible

**Step 5**

Replace the Core hose, when obvious traces of kinks are visible.

**Step 2**

- Check coupler(s) and dust cap(s) for dirt and/or oil leakage
- Clean coupler(s) with a clean and soft cloth, if necessary with water and soap
- Check function coupler(s), see page 4
- If necessary grease with WD40
- Reconnect loose dust cap(s) to coupler(s)

**Step 4**

Replace hoses when bubbles or bulges higher than 1 mm are visible

**Step 6**

Replace the Core hose when damage is such that the one braided layer of high tensile synthetic fibre is clearly visible.
